

# How to send attachment with REST Endpoint

- Use Case: **Send attachment with REST Endpoint and do followings:**
  1. **Write to FTP**
  2. **Parse to return JSON response too**
- Integration Style: App Driven Orchestration
- Connections to be created/ used:
  - REST Connection with role as Trigger
  - FTP Connection with role as Trigger and Invoke
- Integration will look like:
  1. REST Connection will be triggered to take attachment as multipart/form-data with HTML form payload
  2. Write the attachment to Stage File
  3. Read the file from Stage File
  4. Write the file to FTP Server
  5. Map to return the employee records as JSON response
