

Invoke External SOAP Web Service from OIC

- Use Case: **Invoke External SOAP Web Service from OIC**
 - Add two numbers and return the result of addition
- Connections to be created/ used:
 - SOAP Connection with role as Trigger and Invoke for External SOAP Web Service
- Integration will look like:
 1. SOAP Connection will be triggered to take two numbers as input for addition
 2. Since the same SOAP connection is acting as the interface to the external service, no need to have any mapping to pass request parameter
 3. Return the result of addition

Invoke External SOAP Web Service from OIC

- Use Case: **Invoke External SOAP Web Service from OIC**
 - Add two numbers and return the result of addition
- Connections to be created/ used:
 - SOAP Connection with role as Trigger
 - SOAP Connection with role as Invoke for External SOAP Web Service
- Integration will look like:
 1. SOAP Connection will be triggered to take two numbers as input for addition
 2. Map the input received at #1 to the build the request payload for the External SOAP Web Service
 3. Invoke the External SOAP Web Service
 4. Return the response returned by the External Service map
