

Outbound Integration from Fusion using REST Connection

Outbound Integration from Fusion using REST Connection

- Use Case – **Get Standard Receipt(s)**
- Integration Style: App Driven Orchestration
- Connections to be created/ used
 - SOAP Connection to accept Parameters
 - REST Connection to invoke ERP Cloud REST Service
- Integration will look like:
 1. SOAP Connection Trigger will be used to input Report Parameters
 2. Use REST Connection to invoke Standard Receipts REST API to get Receipts Information
 3. Return the receipt information being fetched by REST Connection to the caller/ invoker.
