

How to invoke BI Report from OIC and write output to DB

- Use Case – **Invoke a Payables Invoice BI Report and insert the invoice data into a DB Table**
- Integration Style: App Driven Orchestration
- Connections to be created/ used:
 - SOAP Connection with role as Trigger
 - SOAP Connection for Report Service with role as Invoke
 - Oracle Database Connection with role as Trigger and Invoke
- Integration will look like:
 1. SOAP Connection will be triggered to take Report Parameters as input
 2. Use SOAP Connection to invoke Report Service to extract/ fetch output of the report
 3. Write the Base64 encoded content of reportBytes element (actual report output file) to Stage File
 4. Read staged file in segments and store in DB table using in a Database table which is behind the firewall or not exposed to internet using Oracle Database Connection(Agent Based)
