# End to End Automation of FBDI Process using importBulkData

In Oracle Cloud ERP, in order to import data in bulk using FBDI based integration – importBulkData operation of ERPIntegration Service is used. Now to simplify and automate the entire load and import process includes -

a) Uploading file(s) to UCM

b) Submit Load Interface File for Import

c) Submit Respective Import Jobs

d) Invoke Callback Service URL

**Note –** 1. Generate Data File is done manually for the first time using FBDI templates to verify the Data when imported but can be automated to generate exactly in the form of csv being generated from the FBDI Template.

2. Encryption/ Decryption can be business specific and is achieved through PGP Encryption/ Decryption setup at Security console of Fusion.

# End to End Automation of FBDI Process using importBulkData

## Old Method [LHS] vs. New Method [RHS]

Note – Old Method is still used for Non-FBDI based integrations/ data import

*We will see this using SOAP Service as well REST API. Let's see now .......*
