Cross Reference using OIC Lookup

- Use Case: **Cross Reference - Country Code mapping between source and target system**

- Integration Style: App Driven Orchestration

- Connections to be created/ used:

  ➢ REST Connection with role as Trigger

- Lookup:

Source System Country Code	Target System Country Code
IND	IN
USA	US

- Integration will look like:

1. REST Connection will be triggered to take Country code of Source System as input

2. Use Lookup to derive the target system country code corresponding to the source system country code entered as input as part of #1

3. Return the target system country code in response

deriveXref   **Map to** deriveXref   deriveXref
