How to read file in segments

- Use Case: **Read file in segments**

- Integration Style: Scheduled Orchestration

- Connections to be created/ used:

    ➢ FTP Connection with Trigger and Invoke role

- Integration will look like:

    1. Declare and define Variables which are going to be used in the Integration

    2. List all files from a specified directory (s) of FTP Server. In this example one file is considered

    3. Iterate to download all the listed files into the stage file

    4. Read file in segments and write to FTP Server

    5. Read file in segments reads 200 rows per iteration and files of multiple of 200 rows will get created from the original source file.
